And have you read these?

ARCHITECTURAL BOOKS

HOSPITALS

INTEGRATED DESIGN

by Isadore Rosenfield

Progressive Architecture Library

This authoritative and comprehensive volume on all phases of hospital design, construction, costs, and equipment is written by a well-known hospital consultant who is completely familiar with the architectural problems involved in this work.

This book is a thorough, well-illustrated study based on a lecture series given at the Architectural League of New York under the auspices of the New York Chapter of the American Institute of Architects and the Department of Public Works, New York. This material has been greatly augmented and includes discussions by Doctors Kingsley Roberts, Leo Taran and Otto Bloom. There are also chapters by Thomas H. Creighton and A. Gordon Lorimer.

308 pages, 9x12 inches, illustrated.

Price \$10.75

APARTMENT HOUSES

by Joseph H. Abel and Fred N. Severud

Progressive Architecture Library

An authoritative and comprehensive book giving the latest design, engineering, heating, elevator, and landscaping information on apartment houses. Mr. Joseph H. Abel, A.I.A., discusses over-all and specific design problems and gives an analysis of how good design can affect the return investment. Mr. Fred N. Severud, A.S.C.E., includes in his section a discussion of the latest developments in structural systems, use of concrete, steel, and wood framing. Mr. Clifford Strock, Editor of "Heating and Ventilating," outlines the fundamentals of many possible heating systems and gives some cost analysis of them. Messrs. H. M. Nugent and W. H. Easton, Jr., of the Otis Elevator Company, have made a careful analysis of the problem in vertical transportation. Mr. Alfred Geiffert, Fellow, A.S.L.A., outlines considerations in apartment house landscaping.

280 pages, 9x12 inches, illustrated.

Price \$10.00

ARCHITECTURAL PRACTICE

by Clinton H. Cowgill and

Ben John Small

This comprehensive book covers the professional, business, and legal aspects of architectural practice. Commissions for professional services are traced in minutest detail from the day the client comes in to the last payment for work performed. Theory and practice are successfully woven throughout the book. The social and economic implications of contemporary practice are translated in terms of ready-to-use forms, ways and means, guides, advice, graphic illustrations, and the like. Accounting procedures, bookkeeping systems, almost every procedural form an architect requires for his practice, agreements of every nature, models, drawings, specifications, insurance and bond requirements are all presented in orderly sequence.

396 pages, 9x12 inches, illustrated.

Price \$12.00

YOU WANT TO BUILD A SCHOOL?

by Bursch and Reid

The emphasis of this book is on the group effort of the school planning-building program. Included is a discussion of everyone involved in the planning of a school from the pupil to the architect, even including the taxpayer. There are sections covering the following: Determining the Need for a New School; Master Planning for an Entire District; Preliminary Planning of a School Plant; and How to Use the School. This book is of equal importance to the architect as to the superintendent of schools, school boards, principals, engineers, and all others involved in school-house planning.

150 pages, 6½x9 inches, illustrated.

Price \$3.50

HOMES

by the editors of

PROGRESSIVE ARCHITECTURE

The homes illustrated in this book have been selected by the editors because of their pleasant liveable qualities and, of course, their general architectural excellence. The book is divided into three sections: one-bedroom homes, two-bedroom homes, and homes with three or more bedrooms. There are suburban homes and homes in the country, one-story and two-story arrangements, homes of brick, wood, stone, and even rammed earth construction. It will be a book useful to practicing architects, and at the same time it should be understandable and appealing to the average person.

190 pages, 9x12 inches, illustrated.

Price \$5.00

THIS BUSINESS OF ARCHITECTURE

by Royal Barry Wills

This book should prove of inestimable value to any architect, young or old, who wants to increase his chances of success in the practice of architecture.

Most fascinating of the various sections in any success book is the chapter on how to get business and this is no exception. In "Stalking and Capture of Clients" Mr. Wills enumerates no less than thirty-five methods of selling, both direct and indirect. His advice on keeping office records and documents is excellent and the model printed forms he gives should be of value for reference to the young practitioner. The necessity of keeping the overhead of the practice under foot, of adopting a reliable system of cost accounting, and of avoiding business troubles are all taken into consideration.

The book is profusely illustrated with pen and ink sketches.

210 pages, 5¾x8½ inches, illustrated.

Price \$3.00

(continued on next page)

Any of these books will gladly be sent on 10 days' approval.

let's look it up!

Don Graf's DATA SHEETS

(Revised and Enlarged)

by Don Graf

The world-famous DATA SHEETS by Don Graf have been revised and about one hundred new drawings have been added. These DATA SHEETS contain much original material available in no other architectural reference book. These pages are not just reprinted catalog drawings but are the results of original research in quick, easy-to-use form.

Contents: Materials in General, Structural Design, Mathematics, Planning Data, Mechanical, Construction Details, Drafting Helps, Furniture and Furnishings.

850 pages, 4x7, profusely illustrated, \$8.00

Theatres and Auditoriums

by Harold Burris-Meyer and Edward C. Cole

This book undertakes for the first time to derive theatre design from an analysis of function. The activities of the audience and the operations in presenting all types of productions, from pageant to solo concert to motion picture, have been studied and architectural requisites drawn therefrom.

It provides the analytical basis for good design in a form which the architect will find especially useful in enabling his client to understand the scope and complexities of the problem. Of particular significance is the study of the audience-actor relationship, which must be the basis of all theatre design.

Messrs. Burris-Meyer and Cole are well-known consultants on theatre planning and the technical phases of production.

Chapters include: Nature of Theatrical Performance; The Audience Sees; The Audience Hears; Comfort and Safety; Light, Heat, Ventilation, and Plumbing; The Performance (Routine) in the Theatre; The Acting Area and the Proscenium; Scenery; Stage Equipment and Machinery; Light; Sound; Production Services; Structure of the Theatre; Economics of Theatre Building.

228 pages, 9x12, \$8.00

Planning Secondary School Buildings

by N. L. Engelhardt, N. L. Engelhardt, Jr., and Stanton Leggett

"Planning Secondary School Buildings" is a comprehensive treatment of the problems faced by superintendents of schools, Boards of Education, and architects in planning junior or senior high school buildings that will aid modern educational programs.

This book provides answers and suggestions in great detail on all aspects of high school planning. By virtue of complete insight into the main trends of American education, educational obsolescence in new buildings is avoided and a forward-looking secondary school program is possible.

Among the hundreds of topics treated are: Proper planning to improve the educational usefulness of the school cafeteria, planning the shops for better vocational education, criterion in site selection and development, planning for student activities, the service systems of school buildings, suggested schedules of interior finishes based upon study of maintenance and operating problems in hundreds of school buildings, check lists.

No new secondary school should be constructed without the use of this book in planning.

Order copy on approval, ready early in 1949

Shops and Stores

by Morris Ketchum, Jr.

Whether you are an architect, engineer, draftsman, or store executive you will find this book a great help. The down-to-earth approach of its author assures you of getting the best, most comprehensive and complete information on store design. The author discusses, among other things: the scope and character of design for merchandising; analysis of business and space requirements; the small store in the city and on the highway; small store trends; the large store; the development of a street; structural design and materials; and investment values. This is the third volume of the PROGRESSIVE ARCHITECTURE LIBRARY series.

280 pages, 9x12, illustrated, \$10.00

Color In Sketching and Rendering

by Arthur L. Guptill

This volume offers a vast fund of information on practically every phase of representative painting in water color and related media. Step by step, the text leads through particularly complete elementary chapters (telling exactly what to buy and how to use it) to later professional considerations. Every point is fully explained and graphically illustrated. Numbered exercises are offered for students forced to work without a teacher. Many secrets of the professional artist are revealed.

There are 195 beautiful full page illustrations, many in full color, and 70 text illustrations; a complete index. We feel this is the most valuable text and reference book on the subject yet published.

350 pages, 9x12, handsomely and durably bound in cloth, profusely illustrated, \$12.50

Fundamentals of Perspective

by Theodore DePostels

The widely known author of FUNDAMENTALS OF PERSPECTIVE has evolved a simple and easily understandable method of showing the order in which the lines of perspective are drawn.

By numbering each line of the constructed perspective and signifying its direction with arrows, the procedure and reasons for it become quickly apparent. To further clarify the examples, four colors are used.

NOTE: Foreign customers who buy this book may obtain a separate Spanish, French, German, or Russian translation at no extra cost, on request.

20 plates, 9x12, \$3.00

Perspective Charts

by Philip J. Lawson

The accurate construction of instrumental perspective drawings of architecture, furniture, pieces of merchandise and the like, often requires so much drudgery that many designers doing such work will say "Welcome!" to this new set of eight labor-saving charts. One merely lays tracing paper over the chart which suits his purpose and, following the directions given, proceeds at once with his work, tracing such lines or utilizing such measurements as his problem demands.

8 charts, 21x24 with detailed instructions per set \$2.50
